

**The Western Australian Marine Science Institution [WAMSI],
Western Australian Satellite Technology and Applications
Consortium [WASTAC]
and
iVEC - The hub of advanced computing in Western Australia**

Invitation

For you to attend a half day

Information Seminar:

Marine and Coastal Data Management - a lasting legacy

Followed by an

Open Workshop

Context for Seminar:

Several major national marine data management initiatives [e.g. AODN, BlueNET, eMII, AO-DAAC, Oceans Portal] are currently underway or shortly commencing. The seminar aims to bring WA marine researchers up to date with these national initiatives as well as related developments in WA.

WAMSI research is now underway with large volumes of marine data being assembled over the next 4 years.

iVEC is encouraging and energising research in and the uptake of high performance computing, visualisation and large scale data storage in Western Australia.

WASTAC is a consortium of State & Federal Departments and Universities whose main objective is to maintain a reliable, comprehensive and accessible archive of satellite data.

Opportunities exist to ensure further integration and participation with a view to leaving a lasting legacy of discoverable and accessible marine and coastal data.

When:

Thursday, 25 October 2007

Time:

08:45 – 13:00 [Registration from 08:00 onwards]

1400 – 1600 [For those who would like to discuss opportunities and synergies further at the workshop. Lunch will be served 13:00 – 14:00.]

Where:

ARRC Auditorium, ARRC Building
26 Dick Perry Avenue, Technology Park
Kensington WA

WASTAC
