

Latitudinal study of Leeuwin Current ichthyoplankton

Natalie Millar, Lynnath Beckley, David Holliday & Peter Thompson

- 13 latitudinal transects (34°S – 22°S)
- Cape Leeuwin to North West Cape
- Sampling for larval fishes at 2000m, 300m and 50m depth stations
- Surface neuston & replicate 355µm bongo net tows (<150m depth)
- Multivariate analyses for larval fish assemblages
- Examine association with phytoplankton autumn bloom and dispersal of larvae of tropical fish species
