

Fish faunas of south coast estuaries

Dr Steeg Hoeksema, Ben Chuwen, Brett Crisafulli & Tracy Rodwell

Nearshore and offshore waters of Broke, Irwin and Wilson inlets, Oyster Harbour and Wellstead Estuary are being sampled using seine and gill netting. The biology of the six most important commercial and recreational species are being studied.

Fish community studies

- Species compositions in the basin and river of each estuary
- Comparisons between estuaries
- Development of a suite of species for indicating estuarine condition
- Historical comparisons, *i.e.* Wilson Inlet and Wellstead Estuary

Biological Studies

- Black Bream
- Estuary Cobbler
- King George Whiting
- Australian Herring
- Yelloweye Mullet
- Sea Mullet
